

02161 Project Demonstrations

The project demonstrations will be **face-to-face** in building 358/060b. Participation of all group members is mandatory.

Remember to be there in time for your groups demonstration. The demonstration scheduled is published on DTU Learn.

The demonstration

- Each project demonstration takes 15 minutes with 5 minutes time for the TA's to change groups.
- You should show the TA all of your automatic tests and then execute manually (that is, through the user interface) selected use cases from the report. The TA selects the use case to show. If time is left, the TA will play a bit with your application.
- Note that this is not an oral examination. The TAs will report back to me how your program behaved, e.g., if there were problems executing the systematic test cases or if the program crashed when playing with it, e.g., when entering incorrect data.

After the demonstration

- The grade will be announced via Inside, **after** the reports are evaluated.
